

Project Ensemble - Information Technology Update, Cont.

The Green Mountain Higher Education Consortium required a simple-to-use yet secure single sign-on solution for Oracle, Blackbaud, and other services. We wanted to be able to deploy a flexible, scalable, secure, reliable, and cost effective single sign-on solution that enables people to access services using their existing usernames and passwords. After much thoughtful analysis and reviewing solutions, the Single Sign-On team was able to identify a solution, workable for all three colleges. Current activities include testing and implementation for Oracle Finance and Blackbaud Advancement.
